IMail Server Wins the *Network Computing* Awards 2008 Messaging Product of the Year

Augusta, GA - March 14, 2008 – Ipswitch Messaging, a leading developer of messaging solutions, announced today that IMail Server was awarded the *Network Computing* Awards 2008 Messaging Product of the Year. Hosted annually, the awards ceremony recognizes outstanding products and services in the network computing industry.

“I am thrilled to win this award,” says Tripp Allen, president of Ipswitch Messaging Division. “It is an honor to lead a team that focuses on excellence in software development and superior customer support and satisfaction.” Winners are chosen by the readers of *Network Computing* magazine.

IMail Server is a messaging solution for small to mid-sized businesses. Besides offering premium anti-spam and leveraging third-party anti-virus solutions, IMail also offers secure instant messaging and shared calendaring to make scheduling tasks and appointments easy.

“We will continue to focus on customer satisfaction with high quality software, excellent support, and by adding the features that our customers have requested,” says Allen. IMail has added many of these new features, including the much requested low-bandwidth webmail client, in the new IMail Server Version 10, which releases March 31.

Another Ipswitch, Inc. product, WhatsUp Gold, secured runner-up to Cisco for Network Monitoring System of the Year at the same ceremony.

About Ipswitch Messaging Division

Ipswitch IMail Server delivers crucial communication and collaboration tools without the high acquisition and ongoing administrative costs of systems designed for large enterprises. IMail Server provides solid,

scalable, standards-based email service with Web-based access and administration. For more information, visit <http://www.imalserver.com>
